Who Should Attend: Ideal for police and fire personnel, crime scene technicians, detectives, and agencies without dedicated forensic support. This seminar builds essential competency in forensic photography - from understanding camera equipment and maintenance to mastering exposure, sequencing, composition, and lighting. Participants learn to professionally capture crime scenes, crashes, and injuries, and advance their skills with laser trajectory documentation, fluorescence imaging, and painting with light. Training reinforces chain-of-custody, legal foundations, and courtroom admissibility to ensure every image stands up to scrutiny.

TOPICS INCLUDE

- Camera equipment, camera hardware, camera software, maintenance
- Principles of exposure, sequencing, composition, flash photography, ambient light photography
- General crime scene photography, crash photography, photographing injuries
- Laser trajectory photography, photographing fluorescence, painting with light
- Multiple flash photography
- Footwear and tool mark impression photography
- Chain of custody
- Impact of photographs as evidence
- Courtroom testimony
- Hands-on practicals and much more!

Don Comcast — Instructor, On-Target Strategies

Brings hands-on expertise, experience and proven techniques to every session.
